ROADMAPPING IN PRACTICE III

Scenario-based roadmapping

February 14, 2019 | Stuttgart, Germany

INTRODUCTION

Those who recognize trends and their potential early on and successfully integrate them into corporate planning gain essential competitive advantages. The interlinkage of roadmaps and scenarios can enable companies to develop a robust strategy and derive planning options on different levels in a structured manner.

Using the metaphor of a road map, roadmaps support planning tasks in companies. Beyond the planning of individual disciplines, they make it possible to link different planning levels such as products, markets, R&D projects and competencies. They thus create a common denominator for integrated corporate planning and allow early and continuous coordination between the planning levels. Scenarios on the other hand enable the creation of different potential futures based on most important influence factors and their potential future developments.

At this event, companies will report on the practical use of scenario-based roadmapping and on the creation of roadmaps in companies or networks.

We look forward to welcoming you in Stuttgart.
