

BIH SYMPOSIUM 2018

Exploring Systems Medicine

The 3 Rs of Tissue Repair: Replace – Restore – Rejuvenate

March 16 + 17, 2018

CONFIRMED SPEAKERS:

Kristin Baldwin (TSRI, USA)

René Bernards (NKI, Netherlands)

Mina J. Bissell (LBNL, USA)

Don Cleveland (UCSD, USA)

Maike Sander (UCSD, USA)

Jan van Deursen (Mayo Clinic, USA)

Erwin Wagner (CNIO, Spain)

Marius Wernig (Stanford University, USA)

Maximina Yun (TU Dresden, Germany)

abstract!**

VENUE: Reinhardtstraßenhöfe | Reinhardtstraße 12–16 | 10117 Berlin

The 2017 BIH Symposium intends to explore mechanisms of in situ tissue repair – from molecules to organs – highlighting the emerging concept that health and disease span a continuum of decreasing repair capacities. New avenues for disease treatment hinge on understanding and modulating the mechanisms governing tissue repair. Learning from and harnessing the body's natural repair mechanisms will guide the development of advanced-therapy medicinal products and of selective replacement and rejuvenation strategies.

Join the symposium and discuss current concepts, approaches and challenges regarding the mechanisms of in situ tissue repair and their impact on health and disease.

Interested in presenting your research?

Submit your abstract by January 10, 2018 if you are a scientist or clinician at any career stage working on innovative projects with potential relevance for translation and systems medicine.

Abstract submission is open to all research fields. The scientific organizing committee will review all abstracts and invite the most exciting contributions for oral presentations or poster sessions.

Scientific Organization: Walter Birchmeier, Holger Gerhardt, Francesca Spagnoli, Baris Tursun, Erich Wanker (MDC) | Georg Duda, Angelika Eggert, Burkert Pieske, Clemens Schmitt (Charité)
