## The Main Topic of the Symposium

The first day, titled 'Understanding Housing in a Regional Suburban Context,' is dedicated to theoretical and analytical grounding of general development strategies and practices for accommodating housing demand within the urban-suburban interrelations of local governments, private stakeholders and members of the public. The sessions will map the conceptual landscapes of the wide field of urban-suburban relationships in the regional context of housing, drawing from results of empirical research on pull-push factors such as land availability and market practices, organizational frameworks and stakeholders' roles. In addition, opportunities and challenges arising from digitalization and related new practices, and regional data analytic frameworks aimed at integrating multiple objectives and agendas will be discussed.

The second day, titled 'Materializing Housing Supply,' will analyse real estate investments and their interrelation to the demand and supply gaps on one hand and the financial market framework vs. public subsidies on the other. It is dedicated to a critical review of housing concepts dealing with extensive land use and sprawl. The sessions will further draw attention to the post-suburban redevelopment and reutilization of existing residential and non-residential sites through densification, infill, and retrofitting of post-suburban business locations to meet the currently diversifying demands of the housing market.
