

# The power of many: enhancing climate change mitigation through agricultural research networks (in times of pandemics)

## The expert panel will:

- outline collaborative actions taken over the past 10 years on reducing agricultural greenhouse gas emissions, including through the Global Research Alliance on Agricultural Greenhouse Gases;
- share regional/country perspectives on the value of research networks to address global challenges and meet regional/country outcomes;
- discuss key findings and opportunities to accelerate mitigation science and food security in the context of a complex and challenging global environment;
- discuss how evidence-based research results can be transferred into policy action and how this is done in the different research networks

## Panel guests

### Claus Deblitz

Deputy director of Institute of Farm economics /  
agri benchmark coordinator at Thünen Institute

### Veronica Ciganda

Principal Investigator, Director of the Production and Sustainability Research  
Program at National Institute for Agricultural Research (INIA) Uruguay

### Salva Calvet

Coordinator of Red REMEDIA /  
Associate professor at Universitat Politecnica de Valencia

### Hubert Wiggering

Professor at University of Potsdam / KlimAgrar coordinator

## Moderator

### Hayden Montgomery

GRA Special Representative

### Nina Grassnick

Research associate at Thünen Institute
