LANDSCAPE 2024

KEYNOTES // SCIENTIFIC SESSIONS // POSTER SESSIONS // AND MORE...

Organized &
presented by

Leibniz Centre for
Agricultural Landscape Research
(ZALF)

Rationale & Goals

With two successful editions in 2018 & 2021, the LANDSCAPE 2024 conference will once again bring together international experts to discuss the transformation of agroecosystems. This time to address the importance of visions for the future of agricultural landscapes as well as the roles of innovative technologies and actors in driving sustainable changes in these landscapes. Focusing on the landscape level, the conference provides a unique opportunity for researchers from various domains to share their knowledge and experiences and contribute to the transformation of agroecosystems. LANDSCAPE 2024 invites scientific contributions from multiple disciplines relevant to agricultural landscapes and agroecosystems, including crop and soil sciences, ecology, land systems sciences and bio- and digital technology-associated sciences, social sciences, and humanities.
