Press release

## **Charging technology specialists meet in the Ruhr Valley**

### **Charge Days - First international conference with main focus on e-mobility charging**

The Electric Vehicle Institute of Bochum University of Applied Sciences will host the first international conference with the main focus on charging technology and infrastructure on 23<sup>rd</sup> and 24<sup>th</sup> of March 2017. The event is organized in cooperation with the CharIN e.V. (Charging Interface Initiative e.V.) and takes place in the "Henrichshütte" in Hattingen.

Internationally acclaimed speakers will present their latest findings in topics such as high power charging, interoperability, charging infrastructure and charge point operators, grid integration and smart home charging as well as future governmental requirements and regulations in the EU and US. Scientists, experts, developers and users from the governmental, automotive and industry sector from all around the world are welcome to get expert information about recent developments in charging technology and infrastructure. There will be a chance for face-to-face communication, interdisciplinary discussions and an intensive know how exchange.

More details are provided at [www.chargedays.de](http://www.chargedays.de).
