Press release

Charging technology specialists meet in the Ruhr Valley

Charge Days - Second international conference focusing on e-mobility charging

The Electric Vehicle Institute of Bochum University of Applied Sciences and the CharIN e. V. (Charging Interface Initiative e. V.) will host the second international conference on charging technology and infrastructure on 15 and 16th of March 2018 at the historical metallurgical plant the "Henrichshütte" in Hattingen.

Internationally renowned speakers from USA, Australia, Italy, Netherlands, Switzerland, Portugal, Finland, and Germany will present their latest findings in topics such as high power charging, interoperability, charging infrastructure and charge point operators, grid integration, smart home charging, and data security of charging stations as well as future governmental requirements and regulations in the EU and US. Scientists, experts, developers and users from the governmental, automotive and industry sector from all around the world are welcome to get expert information about recent developments in charging technology and infrastructure. There will be a chance for face-to-face communication, interdisciplinary discussions and an intensive know how exchange.
